

PRODUCTION X

Building OTHO

Where you stand today, what's broken in Indian property platforms, the product we build in that gap, and the first 90 days.

STARTING

Neopolis, Kokapet

FIRST MILESTONE

90 days

THE MODEL

CarWale, for property

HORIZON

Hyderabad, India, global

What's in this

01 **Where OTHO stands today**

The honest audit. Both names, zero footprint.

02 **The gap in the market**

Why no existing platform can fix its worst problem.

03 **SWOT**

What we have, what we lack, and what could go wrong.

04 **The model and the platform**

CarWale for property. What we build, borrowed from whom.

05 **Budget and what it returns**

Three levels, and how little has to happen to break even.

06 **The first 90 days**

Week by week, with something finished each month.

07 **Ten years**

Hyderabad to India to global, as a sequence.

What I found

I searched for OTHO Realty the way a buyer would. Then I searched for Propertunity.

"OTHO Realty" on Google	Returns Square Yards, 99acres, NoBroker. Nothing about you.	NOTHING
"Propertunity" Hyderabad	Returns firms in Florida, the UK and Australia. Not you.	NOTHING
Domain	Secured — nothing live on it yet	CLAIMED
Social accounts	Created — nothing published yet	CLAIMED
Published content	No articles, guides or video indexed anywhere	NOTHING
Press and mentions	No third-party coverage found	NOTHING
Founder relationships	Two decades, tier-one developers. The whole asset.	STRONG

The plots are claimed. Nothing is built yet.

Domain secured, social accounts created — and nothing published on any of them. To a buyer searching today, OTHO does not exist.

That's an advantage, not a criticism. No dead campaigns, no complaints ranking on page one, nothing to unpick. Every competitor here carries years of that. Everything OTHO publishes from now compounds instead of competing with its own past.

The market you're entering

**₹2.6 lakh

Where it reaches by
2031

IMARC / KEN RESEARCH

19 months

Unsold inventory in
Hyderabad — worst in
India

ANAROCK

40%

Of ~10,000 Neopolis
homes, still unsold

TRADE PRESS 2026

Two things are true at once. The category is large and growing fast. And in Hyderabad, developers are sitting on stock they cannot move — agents are quoting Neopolis units near ₹6,300/sq ft against list prices of ₹11,000–12,000.

That gap is the opening. When a developer's own pricing is undercut by half in the grey market, what they need is not another listings portal. It's someone who brings buyers who arrive already convinced.

The gap

Every major Indian platform runs the same business: collect a lead, sell it to several brokers, let them fight over it.

What buyers complain about

- Spam is complaint number one across reviews of every major portal
- People keep a second “property phone” — or change their number
- 43% report encountering fraudulent listings
- Listings cloned across portals; AI-generated fake interiors
- The same flat listed by eight brokers at six different prices

Why nobody fixes it

They can't. Reselling one lead to eight brokers IS the revenue model.

A portal that promised never to share your number would have to dismantle its own P&L to keep the promise.

That's the gap. Not a feature they forgot — a door their business model locks from the inside.

Meanwhile the question buyers most want answered — which of these should I actually buy? — is served by nobody. Portals answer “what is available.” Nobody answers “what is good.”

A platform with two million listings is worthless if enquiring on one gets you eight phone calls.

Who we're up against

PLAYER	SCALE	MODEL	WHERE THEY'RE WEAK
NoBroker	₹803cr FY24, +32% 34mn installs 3.2mn monthly users	Zero brokerage. ₹999 subscription. Services — loans, movers, interiors. Bank referrals ~₹120cr.	Built for rentals and resale, not new launches. Thin on premium. No advisory layer.
99acres	~13.3mn visits / month	Classifieds. Developers and brokers pay to list and be seen.	Pure volume. Lead resold repeatedly. No opinion on anything.
MagicBricks	~12.1mn visits / month	Classifieds plus locality data and price trend tools.	Has data but no judgement. Tools sit beside the same lead-resale engine.
Housing.com	~9.8mn visits / month	Classifieds with better design and mapping.	Best interface of the four, same underlying business.
Square Yards	₹1,410cr FY25 EBITDA ₹46cr	Full-service brokerage at volume.	3.3% margin. Proof that chasing transaction volume is a trap.

THE LESSON IN THE LAST ROW

**₹1,410cr in.
₹46cr kept.**

Volume brokerage in India is a treadmill.

OTHO should never compete on listing count or transaction volume. That race is won by whoever burns the most money, and the prize is a 3% margin.

Compete on judgement instead. Judgement has margin.

SWOT — what we have, what we lack

● Strengths

Tier-one relationships

Direct access to DSR, Sattva, My Home, Aparna, Prestige. Around 70% of Indian residential sales run through channel partners. A funded startup can buy engineers; it cannot buy twenty years of trust with a developer's sales head.

Timing

A 19-month overhang means developers are actively looking for a better answer right now.

No legacy tech debt

The portals are locked into the shared-lead P&L. OTHO can build the clean architecture from zero.

Regulatory tailwind

TRAI and DPDP rules make the spam-and-resell model steadily more expensive.

● Weaknesses

No product or data engineering yet

The comparison engine is a data acquisition and verification problem across RERA, HMDA and registration records. This is what kills proptech startups.

Zero digital brand equity

Twenty years of word-of-mouth does not transfer to search.

Advisory doesn't scale linearly

Every mandate consumes senior human time.

Key-person dependency

Relationships and podcast authority both sit with the founders.

Working capital

Commission pays on registration, so cash lands 3–9 months behind the cost.

SWOT — the opening, and what could go wrong

● Opportunities

The overhang itself

Roughly 97,000 unsold units is a large, motivated mandate pipeline. Every stuck project is a sales conversation.

The transparency vacuum

No Indian portal publishes loading factor, true density or UDS as standard fields.

AI citation land-grab

Brands cited in AI answers earn far more clicks, and AI referral traffic converts around 3x. That window is open now.

Bharat Future City

Master plan and zoning due December 2026 — a dateable, high-search event with no incumbent authority.

NRI buyers

Under-served, higher ticket sizes, and they need an honest proxy on the ground.

● Threats

Developer backlash on honest negatives

We earn from developers while publishing unflattering facts. Needs a written editorial charter, agreed up front.

Incumbent capital response

Housing or 99acres can copy a comparison engine faster than we can build a brand. Defensibility is exclusive inventory and verified data, not features.

A deepening downturn

If the overhang passes 24 months, marketing budgets and commissions get cut together.

RERA exposure

₹10,000/day penalties and mandatory RERA numbers in every ad. One sloppy campaign is existential for a firm selling trust.

Defamation risk

“This project is bad” is litigable. A cited pollution reading is not. The distinction must be enforced editorially.

WHAT THE SWOT FORCES

The moat is not the platform. Features get copied.

Exclusive inventory

Mandates competitors literally cannot list.

Verified data

A proprietary dataset built by physically auditing projects.

A trust brand

One the portals cannot adopt without cannibalising their own revenue.

The platform is the delivery mechanism for those three. Build in that order.

The model: CarWale, for property.

CarWale did not beat the classifieds by having more cars. It won by owning the step before the transaction — expert reviews, side-by-side comparisons, price guides, owner ratings, EMI calculators.

It became where Indians go to decide. It reached 65 million car buyers and built roughly ₹1,260cr of revenue on the intent it had already earned.

Two different businesses

EVERYONE ELSE

Classifieds business

- Answers “what's available”
- Monetises by reselling your attention
- Wins on volume and ad spend
- The buyer is the product

OTH O

Research business

- Answers “what should I buy”
- Monetises intent it has already earned
- Wins on trust and depth
- The buyer is the customer

In Indian real estate, the research layer is empty.

No price estimate, no expert project reviews, no honest comparison engine, no resident ratings. Every player is fighting over the classifieds half of the market.

Every property platform tells you
what's for sale.

**OTH0 tells you what's
worth buying.**

The signature screen

Two projects. One is 5% cheaper on the board, and 2% dearer in reality.

	Project A	Project B
Advertised rate	₹9,483	₹9,994
RERA carpet area	1,842 sq ft	1,861 sq ft
Loading factor	44%	36%
Real rate on carpet	₹13,720	₹13,440
Land share per unit	Lower	18% more
OTHO verdict	Looks cheaper	Actually cheaper

Every portal in India shows the two advertised numbers and lets you pick the wrong flat. Figures illustrative until built from live TG-RERA filings.

OTHO PROJECT REVIEW · KOKAPET

Neopolis — Tower A

Reviewed on site, 14 August 2026. Verified against TG-RERA filing.

● What's good

Lowest loading factor in the layout at 36%

18% more land per unit than the nearest comparison

Developer has delivered four projects on schedule

Genuine 9am commute to Financial District: 14 min

● What we'd flag

Metro Phase 2 is unfunded — do not price it in

Amenity ratio is 1 clubhouse per 640 families

Water: borewell dependent, no HMWSSB line yet

East-facing units overlook the service road

7.4

LOCALITY REPORT · UPDATED MONTHLY

Kokapet

Infrastructure confidence — what's funded, what's promised

ORR access	Operational since 2018	CONFIRMED
Financial District road widening	Funded, under construction	LIKELY
Metro Phase 2 corridor	Approved, financial sanction pending	UNFUNDED
HMWSSB water line	Proposed, no tender issued	UNCERTAIN

Real drive times, measured at 9am on a weekday

14 min Financial District	26 min HITEC City	38 min Airport	19 min Gachibowli
------------------------------	----------------------	-------------------	----------------------

What goes in the platform

Nothing here is unproven. It's proven elsewhere and missing in Indian property.

Comparison engine

Any two projects side by side on carpet, real rate, land share, density, possession.

FROM CARWALE

Expert project reviews

OTHO rates every project it covers, with a score and a written verdict. Including the bad ones.

FROM CARWALE

Resident reviews

People who live there rate build quality, management, and what broke first.

FROM CARWALE

Real rate calculator

Loading factor exposed. What you pay per usable foot, not per marketing foot.

OTHO ORIGINAL

Honest negatives

Every project page lists what's wrong with it. The trust engine of the whole platform.

OTHO ORIGINAL

Price estimate

What a unit is actually worth, from registration data — not from the asking price.

FROM ZILLOW

What goes in the platform

Continued — the trust and service layer.

Locality pages

Price history, infrastructure status, commute times measured at peak hour, schools, water.

FROM MAGICBRICKS

Your number stays private

Never sold, never shared with brokers. One conversation, with OTHO.

FROM NOBROKER

Verified listings only

Every project checked against its RERA filing before it appears. No cloned photos.

FIXES THE #1 COMPLAINT

Site visit booking

Real calendar slots, confirmed on WhatsApp. Not a form promising a callback.

FROM NOBROKER

Infrastructure tracker

Metro Phase 2 and Future City with funding and construction status, not developer promises.

OTHO ORIGINAL

Services layer

Home loans, legal checks, registration, interiors. Added later, once trust exists.

FROM NOBROKER

Built in four layers

LAYER 1

Days 1–90

Trust

Website, project pages, comparison engine, reviews and guides. No listings, no transactions. We earn the right to be believed before we ask for anything.

LAYER 2

Months 4–12

Coverage

Every meaningful Hyderabad project reviewed and comparable. Resident reviews live. Price estimates from registration data. The default check before buying in this city.

LAYER 3

Year 2

Transactions

Exclusive developer mandates, site visits, bookings. Revenue arrives on intent we already own, so cost per booking is a fraction of portal leads.

LAYER 4

Year 3+

Services and data

Loans, legal, registration, interiors. And the data business — developers and banks paying for what OTHO knows about demand. The high-margin end.

Every competitor started at Layer 3 and tried to reverse into trust. It doesn't work — you can't earn credibility from people already annoyed by your calls.

What we produce

FORMAT	WHAT IT IS	VOLUME	JOB
Project review film	8–12 min walkthrough with a verdict. Good and bad, on camera.	2 / month	The signature format. Builds the library.
Comparison film	Two projects, one screen, real numbers.	1 / month	Most shared format. Drives the tool.
Founder podcast	30–40 min with a developer, planner, architect or lawyer.	2 / month	Authority. Only OTHO can book these guests.
Locality deep-dive	Kokapet, Financial District, Tellapur — including drawbacks.	1 / month	Search traffic and AI citations.
The dictionary	Loading factor, UDS, carpet vs SBA, reading a RERA filing.	2 / month	Permanent traffic. Gets OTHO quoted by AI.
Monthly market note	Registrations, prices, launches, absorption. Real data.	1 / month	Journalists start quoting it. Free PR.
Vertical clips	Cut from everything above.	20–25 / month	Reach on Instagram, Shorts, LinkedIn.
Founder posts	Site observations, pricing oddities, war stories.	8–10 / month	Nobody can copy twenty years of stories.

All of it from two shoot days a month — one studio, one on site. Roughly 35 usable pieces. Production is what Production X does, which is why this costs a fraction of agency rates.

How we promote it

YouTube	Review films, comparisons, podcast	Where property research actually happens now
Instagram	Vertical clips, project reveals, founder pieces	Reach and recall
LinkedIn	Founder posts, market notes, commentary	Reaches GCC employees — the real buyers
Search & AI	Guides, locality pages, comparisons written to be cited	Free enquiries that compound monthly
Google Search ads	Project names, locality and competitor terms	Small budget, highest intent only
Meta retargeting	People who watched a film or opened a project page	Cheap re-engagement. No cold reach.
WhatsApp	Opt-in updates, visit confirmations, conversations	Highest open rate in this market
PR	Market note pitched to Telangana Today, Deccan Chronicle, Siasat	Third-party credibility, no media cost
Developers	Co-marketing on mandate projects	They fund reach we would otherwise buy
Portals	Listings for coverage only	Necessary, never the core

The free one that matters most: response time. A lead that waits four hours is gone.

Budget

Three levels. Start low, move up only when the numbers justify it.

LEVEL 1

Foundation

₹1.2L

PER MONTH

Media spend	₹40,000
Tools & CRM	₹15,000
Production X	₹65,000

Website live, podcast running, articles publishing. Paid limited to project-name search.

LEVEL 2 · RECOMMENDED

Build

₹2.5L

PER MONTH

Media spend	₹1,00,000
Tools & CRM	₹20,000
Production X	₹1,30,000

Full content calendar, two shoot days a month, search and retargeting live, portals active.

LEVEL 3 · MONTH 7+

Scale

₹5L

PER MONTH

Media spend	₹2,60,000
Tools & CRM	₹30,000
Production X	₹2,10,000

Only once cost per booking is known and working. Adds Meta reach, YouTube ads and PR.

Media is the part that scales. Production and management stay roughly flat, because the content engine runs on the same two shoot days whatever the ad budget is.

What it costs to start

Website and comparison engine v1	9 project pages, comparison tool, real-rate calculator, guides, visit booking, CRM connected	₹2-3L
Podcast setup	We already own the cameras. This is set dressing and sound only.	₹30-50k
Brand kit	Logo application, templates, partner collateral, ad templates with RERA number built in	₹40-60k
Total setup, before launch		₹2.7-4.1L

Built once, reused on every project after Neopolis. Only the shoots repeat.

One honest caveat: version one of the comparison engine is hand-built data for 10-15 projects. Automating it — pulling RERA and registration records directly — is a Layer 2 engineering cost we'd scope properly once we know the data is worth automating.

What we measure

Reported from the first week of spend. These are counted, not estimated.

● Brand search visibility	Whether OTHO appears when someone looks for it	Monthly
● Podcast views and watch time	Whether the authority play is landing	Monthly
● Enquiries by source	Which channels produce — free and paid counted separately	Weekly
● Cost per enquiry	Whether paid media is getting cheaper or dearer	Weekly
● Response time	How long a buyer waits before a human replies	Weekly
● Site visits booked vs held	Whether we bring serious people or curious ones	Weekly
● Bookings by source	The number that finally matters	Monthly
● Cost per booking	What it costs to sell one home through marketing	Monthly

How this helps: these decide the budget. If cost per enquiry falls and site visits convert, we move up a level. If they don't, we stop and fix the funnel before spending more.

What it takes to break even

At this budget the useful question isn't return multiples — it's how little has to happen before this pays for itself.

	Foundation	Build	
Monthly cost, all in	₹1.2L	₹2.5L	From section 11
Average unit value	₹2.5 Cr	₹2.5 Cr	OUR ASSUMPTION
OTHO commission	2%	2%	OUR ASSUMPTION
Revenue per booking	₹5L	₹5L	Calculated
Bookings needed to break even	1 in 4 months	1 in 2 months	Calculated
Return at 1 booking a month	4.2×	2.0×	Calculated
Return at 2 bookings a month	8.3×	4.0×	Calculated

The two amber rows are ours. Give us your real unit value and commission and this table updates in front of you — it's the only part of the plan we're guessing at. Note too that commission pays on registration, so cash lands three to six months behind the spend.

13

The first 90 days

One project — Neopolis — used to build and prove the whole system.

Days 1-30 • Foundation

Identity, plumbing, first content

- OTHO brand applied properly — logo, templates, tone; the Propertunity change completed everywhere
- Hosting, analytics and CRM live on the domain you've secured, with routing and a response clock
- The social accounts you've created completed and activated — bios, links, first posts
- Website design signed off; comparison engine specified
- Sit with sales: what buyers ask, where they walk away
- First studio day — two podcast episodes, founder pieces to camera

END OF MONTH 1

OTHO exists online, CRM works, two episodes in hand

Days 31-60 • Launch

Website live, publishing starts

- Website live — Neopolis project page, comparison engine, real rate calculator, guides, visit booking
- Podcast launches, fortnightly from here
- First project review film and first comparison film published
- Guides and locality pages start publishing weekly
- Google Search on project terms; portal listings up
- Site shoot — walkthrough, drone, progress, location drive

END OF MONTH 2

Platform live, first tracked enquiries, search indexing

Days 61-90 • Prove

Widen, measure, decide

- Meta retargeting on, now there's an audience to retarget
- Second and third project reviews — the library starts
- First monthly market note published and pitched to press
- Channel partner kit with per-partner tracking links
- Full funnel report from real numbers — targets set here, not before
- Documented playbook so project two starts at week six

END OF MONTH 3

Real cost per enquiry, agreed targets, a repeatable system

After the first 90 days

Months 4-6

Review library grows to 10-12 Hyderabad projects. Resident reviews open. Search and AI start delivering enquiries at no media cost. Referral programme live.

First enquiries arriving free

Months 7-9

Price estimates built from registration data. Second and third mandates onboarded using the Neopolis template. Paid media scales only if cost per booking justifies it.

Three projects on one system

Months 10-12

Every meaningful Kokapet and west Hyderabad project covered. Market note quoted by press. Services layer begins — loan and legal partners.

Default place to check in west Hyderabad

Where this goes

Year 1 HYDERABAD WEST	Own one micro-market completely	Kokapet, Financial District, Narsingi, Tellapur. Every project reviewed and honestly rated. The goal is not scale — it's proof the model converts better than portal leads.
Year 2 HYDERABAD	The whole city, plus transactions	Full city coverage. Exclusive mandates as the core revenue line. Services layer live. The name buyers check before visiting anything.
Years 3-4 SOUTH INDIA	Bangalore, Chennai, Pune	The content and review system is city-agnostic — only the data changes. Each city launches on the template Neopolis produced.
Years 5-7 INDIA	National platform, data business	Top ten cities. The high-margin line arrives — developers, banks and funds paying for OTHO's demand data.
Years 8-10 GLOBAL	NRI corridors first	The first step abroad isn't a new market — it's this market from the other side. Gulf, Singapore, US and UK buyers who need honest remote due diligence.

Ten years is four cities and one honest habit, repeated.

What we need from you

One person who can approve	Approval by committee misses launch windows.	Day 1
Founders on camera, twice a month	Half a day. The reviews and podcast are the whole plan, and only you can front them.	From week 3
Two guest introductions a month	Your relationships are what make the podcast unmatched.	Ongoing
Willingness to publish negatives	The honest reviews are the moat. Soften them to protect a relationship and the strategy collapses into another portal.	Agree now
Your real numbers	Average unit value and commission, so the model stops being our guesswork.	Week 2
Weekly time with sales	Marketing that doesn't hear objections keeps producing leads sales can't close.	Ongoing

The hardest one is publishing honest negatives on projects run by developers you've known twenty years. It's also the only reason a buyer would believe anything else on the platform.

**Ninety days to exist.
A year to be trusted.
Ten to be everywhere.**

PRODUCTION X

Strategy & launch plan for OTHO Realty · August 2026
